

Nature-Based Solutions Services – Land Owners and Land Managers

What are Nature-Based Solutions?

Nature-Based Solutions (NBS) involve working with nature in order to protect and restore ecosystems, while also addressing challenges such as climate change or flood-risk management.

They have the potential to offer huge benefits, both to local people and to local ecosystems, and they increase our resilience to future economic or environmental crises, helping us to strive towards a net zero carbon future.

There are a number of government grants and other funding mechanisms available to support this approach. This makes putting nature at the heart of land management both financially sustainable and environmentally beneficial.

Who do we work with?

Our team works with a diverse range of clients in and around Surrey, including farmers, smallholdings, golf courses and larger estates, helping them to manage their land better for nature.

How can we help?

We can provide advice and support based on your individual needs, and we will work together with you to develop plans and identify suitable NBS that could benefit your site, local biodiversity and potentially the wider community. We can also help you map your site and give you a visual guide to management options.

If you are a landowner or land manager and would like to work with us, please get in touch.
